VJD1 Tachometer-signal Transmitter (Isolated Single-output and Isolated Dual-output Models)

GS 77J1D01-01E

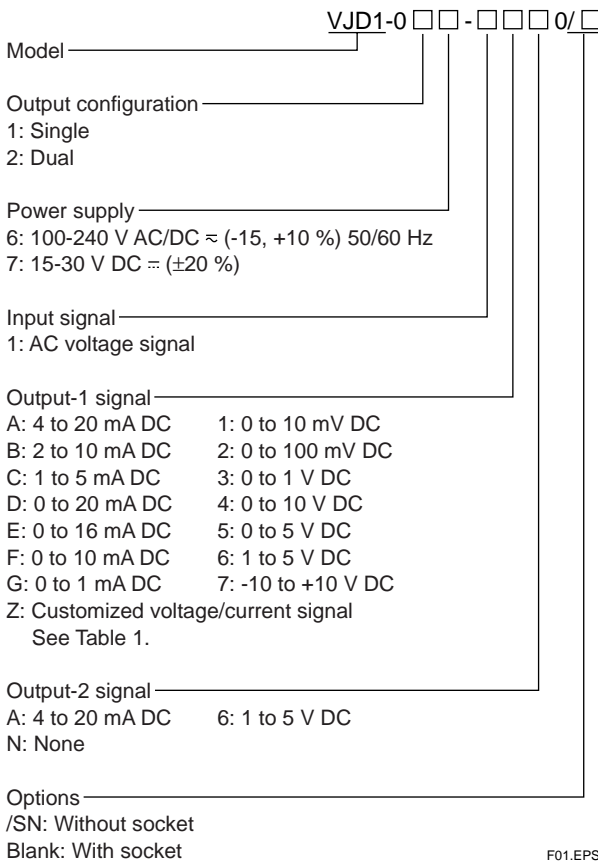

General

The VJD1 is a compact, plug-in tachometer-signal transmitter that receives single-phase, AC voltage signal from an electric tachometer and converts it into isolated DC voltage or DC current signals.

The VJD1 transmitter features:

- AC-to-DC conversion based on mean-value rectification;
- four isolated ports (input, output-1, output-2, power supply and grounding) on a dual-output model;
- a withstanding voltage of 2000 V AC;
- a wide supply voltage range - supporting both 100 V and 200 V power lines of AC or DC; and
- close side-by-side mounting.
